

# CASE STUDY

Wisconsin Manufacturing Firm Uses SharePoint and Power Automate for Quality Management System

## AT A GLANCE

### CHALLENGES

- ISO certification compliance
- Storage & management of internal procedures
- Store, control, & update documentation in a controlled manner

### BENEFITS

- Efficiency with easier approval process

### PRODUCTS

- Power Platform Development

## OBJECTIVES

While Andis was evaluating and migrating to a different ERP solution to automate business processes, it also needed a solution to store and manage internal procedures and job aides to stay compliant with ISO certifications.

Andis enlisted the expertise of Apsidien to understand the requirements of the existing processes and approvals relating to quality management within the organization and implement a solution utilizing SharePoint and Power Automate to store, control, and update documentation in a controlled manner.

## SOLUTIONS

As a result of the solution, different areas of the manufacturing process can submit new or updated instructions and a multi-tiered approval process is started to ensure the changes are correct.

The use of SharePoint document libraries with appropriate metadata along with Power Automate approvals creates a simple, yet powerful solution to cover multiple scenarios.

Andis Company is a Wisconsin-based manufacturer of world-class grooming products used by both professionals and in the home.
